

Title: Associations of Internet Use and Pregnancy Loss with Depression and Anxiety among Women in Bangladesh: Evidence from the 2022 BDHS

Version: 0 **Date:** 12 Oct 2025

Reviewer's report:

Thank you for your work. This study examines the correlation between reproductive events, internet usage, and mental health among women in Bangladesh. The wording could be refined by improving coherence, streamlining statistics presentation, and elucidating interpretations. The methods section must provide data weighting and the confounders addressed in the regression analysis. The findings section should refrain from reiterating percentages and instead emphasize their consequences. The conclusion should more effectively link the argument for digital inclusion to particular mental health mechanisms instead of remaining generic in policy terms. The abstract is informative but requires enhanced coherence, conciseness, and analytical depth. Thank you.
